Continuation Sheet (PTO-303)

Application No. 10/805,005

Continuation of 3. NOTE: Claim 24 requiring, "measuring said asymmetry in said detector" was not previously presented during prosecution on the merits.

Continuation of 11. does NOT place the application in condition for allowance because: An asymmetry in the carrier frequency will necessarily result in an asymmetry of the modulated frequency at the detector, as the modulated frequency is a result of the carrier being modulated according to the various servo feedback loops. Lines 11-28 of column 12 disclose that the laser generates frequency components which are asymmetrical about the carrier. Reasoning is held from the final rejection.
